Curriculum for Little Daisies Kindergarten

According to BayKiBiG/BEP and the Finnish Curriculum

Updated October 2020

Little Daisies Kindergarten
Kirchenstr.38
81675 Munich

www.littledaisies.com

Dear Parents and Interested Parties,

The following curriculum introduces you to our work in the Little Daisies Kindergarten. Our aim in this document is to give you a closer look at where we set our educational priorities as well as everyday kindergarten life at Little Daisies.

We know this curriculum is not set in stone. Changes may occur in the center's setup, in the application of new educational methods and theories or in legislation. Similarly, the lives of Little Daisies' families are constantly changing. For one or more of these reasons, we may need to and want to adapt what we do. That's why we regularly review our curriculum as part of the quality management measures at the center. Doing so also gives our staff a chance to understand and reflect on our curriculum's content, goals and methods. As representatives of Little Daisies' families, the parent board is also involved in our curriculum's evolution. We prioritize establishing trust between families and teachers, which we express through our continual dialogs, collaboration and joint reflection.

"The children come first" is our mission statement. It's only natural that the interests and needs of Little Daisies' children lay the foundation of our work. Each day we discover the world along with the children, in a hands-on and constructive way. The basis for this is trust, security and a loving environment that provides the children with a strong foundation for their growth and development.

Little Daisies Kindergarten accepts children 3 years and older, regardless of their parents' religion, belief system, nationality or social class. The children may stay at the kindergarten until they start first grade.

We wish your children a happy and enriching experience at the kindergarten and hope we live up to our guiding principles.

Munich, June 30, 2017

Cornelia Ottersbach

1. Introduction

This educational concept serves as the basis for our educational work at the Little Daisies Kindergarten.

We follow the Bavarian Qualification and Education Plan (Bayerischer Bildungs- und Erziehungsplan or BEP). The Finnish Curriculum that is used as the basis of educational work in Finnish kindergartens and crèches is also included in our concept. In addition, we work according to the Feiland concept, which was developed by Herbert Österreicher and Ms. Edeltraud Prokop. All concepts state that the social context in which a child learns plays a primary role in that child's development. The Finnish approach enriches the Bavarian concept through its ideas on early introduction of a second language and its strong emphasis on the welfare of the group. The development and enrichment of the individual is an integral part of this process. The outdoor concept focuses on the direct experience of nature and exploring the neighborhood. We design the learning experiences and the free play time outside. Outlined in the following pages are how we work, what goals we are aiming for, and the organizational matters at Little Daisies.

2. Our Mission Statement

The children come first.

We offer them the opportunity to develop to their full potential in a safe, positive and creative environment. Every child will feel special at Little Daisies and will learn that they are a valuable part of the group.

In order to reach this goal, we strive to continually develop as individuals and as a team.

Our Mission Statement shows our commitment to the child and our pedagogical work:

“The children come first.” - The whole of our work and attention is centered on the children and their complete welfare. We shift our attention to other things only when we are certain that the children are being well looked after. Here, we follow the guiding principle that children and adults at Little Daisies are equal but don't have equal rights. In our approach, we pay attention to what makes each individual unique. We seek to be in touch with all children at Little Daisies, to understand them, accept them, and acknowledge them for who they are. By nature, children are curious and want to grow and develop. Little by little, children learn to be more responsible for themselves, to act independently and, later on, to act on behalf of others.

However, adults are ultimately responsible for and have the power to decide about children's safety, the quality of relationships and general mood in the center. Adults also enable children to be creative and to reach their full potential. Teachers observe the children and, based on each child's developmental stage, decide how much responsibility and decision-making power to give a child to keep it challenged without overwhelming him or her.

„We offer them the opportunity to develop to their full potential in a safe, positive and creative environment.” – The main purpose of kindergarten education is to give children new developmental and educational opportunities, which can only happen in a loving environment among people they trust. This supports and strengthens the children's physical, mental, social, cognitive and emotional development. This development along with the encouragement of caregivers fosters the children's confidence and independence. They can be creative and discover their environment and be keen to learn new things that expand and enrich their experiences. Through multifaceted, creative activities and learning materials, we offer the children the opportunity to realize their potential within their own learning style and speed. We also try to recognize any difficulties and find ways to support them.

“Every child will feel special at Little Daisies and will learn that they are a valuable part of the group.” – At Little Daisies, we view each child as an individual, recognizing their uniqueness and personality. We support the children in their current developmental stage and show them that the world is open for them and they can trust their own abilities. At our center, we identify the children's individual needs and make them part of our teaching. Children are actively involved in the daily agenda and their activities. Equally important is each child's social development. The children learn they are social entities and that they need to abide by certain rules to be part of this community. Aware of bias, they learn how to deal with conflict, make friends, and accept children from other cultures, genders and abilities. By being part of a group, they see first-hand how many things are easier as a team and that each person can contribute their own strengths.

“To reach this goal, we strive to continually evolve as individuals and as a team.”

Working as educators committed to providing high-quality care, it is important for us, as individuals and as a team, to continually advance our know-how and skills. Our daily actions set an example for the children. We must be aware of this at all times and ensure our behavior is appropriate.

3. Guidelines and Framework

3.1 *Hours of Operation and Booking Times*

The Little Daisies Kindergarten is open, Monday to Friday, from 8:00 to 17:30. Families have a choice of the following booking times: 3-4 hours, 4-5 hours, 5-6 hours, 6-7 hours, 7-8 hours, 8-9 hours and over 9 hours. The outdoor group is outside the premises of the kindergarten from around 9:15am to 3:15pm - on forays into nature and the neighborhood or at the kindergarten container specially set up for them.

Every year the kindergarten is closed between December 23 and January 7, and between August 13 and 31. It is also closed on one day before and one day after the public Easter holidays. Additionally, Little Daisies is closed on Bavarian public holidays and on five additional days for team in-service and curriculum work.

Any other opening or closure dates will be set in agreement with the parent board.

3.2 *Group Size, Teaching Staff and Staff Absences*

There are 2 groups in the Little Daisies Kindergarten: the so-called "house group" and the "outdoor group". The house group consists of 25 children aged 3-6 years. She is supervised by four to five educational staff members. The outdoor group consists of 14 children aged 3-6 years. It is run by 3 pedagogical staff members, one of them is an intern who mainly works in the outdoor group and provides support in the house kindergarten.

This ensures that even if one person is absent, there are enough staff people present to care for the children. Should multiple teachers be absent in parallel, we contact a substitute. We keep and update a list of substitutes that have worked for us time and again for many years, which means they are familiar with our routines and know the children.

3.3 *Foreign Language Kindergarten*

From January 1, 2017 to December 21 2020, our center is participating in a national program entitled, "Foreign Language Crèche: Languages Are the Key to the World". The program is funded by the German Federal Ministry for Families, Seniors, Women and Children. During

this timeframe, the staff is supported and mentored by an additional part-time (19.5 hours/week) qualified team member and an external advisor.

Over the course of the program, the teaching staff learns to systematically observe **language development** of children as well as their own language use. From this, ideas are generated that can be applied to regular language education in the crèche.

Everyday situations are accompanied verbally, according to children's development and age, and the children are given a variety of opportunities to speak up and to try out their own language skills. In addition to practical work, an additional specialist informs the team about the other theoretical topics covered in the areas previously mentioned. Inclusive education and collaborating with families are also focal points.

When **working with families**, we seek to create from the outset an equal and valued educational partnership that focuses on a child's well-being. By asking certain questions, whether at the first parent evening or in the contract documents, we learn about parental expectations of the kindergarten. It is important for us to let parents participate in the educational process of their child. For instance, through intercultural parents cafés, multilingual offers in the morning circle and our music day. This allows us to get to know the knowledge level, skills and interests of the families, so we can expand the educational offerings of the center. If necessary, we support families with counseling and educational activities such as theme-based parent evenings on healthy nutrition and school enrolment. As successful educational partners, we regard all those involved, parents as well as teachers, as partners, experts, supporters, role models, people with feelings and individual life stories.

Being inclusive means, we view each child as an individual and treat them with respect, regardless of gender, sexual orientation, ethnicity, religion, cultural background, competences or other characteristics. All children have the same opportunity to participate in everyday life at the center, such as children's conferences, projects and activities. This helps us ensure equal educational opportunities long term.

3.4 Responsible Body and Publication of Information

The responsible body of the center is Little Daisies GmbH. This curriculum as well as the monthly tuition, meal costs, deposit and admission fees are published on our website, www.littledaisies.com.

3.5 *Classroom Setup at Little Daisies*

The large rooms of the kindergarten are divided into various spaces with different areas of educational focus for the children to explore. Throughout the center, the children's work (pictures, crafts, photos, etc.) is displayed, so they see traces of themselves reflected in their surroundings.

The areas of the kindergarten include:

- a large open space with a loft
- a quiet area
- an eating area/creative space
- a play kitchen area with dolls and a play store/dress up clothes
- a construction and car area
- a preschool room with a computer
- a reading area
- a playroom/nap room
- a kitchen
- a courtyard playground with a sandbox, climbing area and slide
- children toilets and separate adult toilet
- an office/staff room

In the courtyard, there's an approx. 40 m² playing area for the children to use. It includes a climbing space, sand box and slide. The children also have access to around 70 m² of additional space in the courtyard.

Furthermore the outdoor group has a site of approx. 140m² at the edge of the Hypopark. A heated 25m² kindergarten container is located on this site, in which the children can rest and warm up. There is a separate toilet room, chairs and tables as well as shelves with materials and games.

Outdoor house and grounds of the outdoor group

4. General Goals of our Education Program

4.1 *General Educational Goals*

On the one hand, the goals of kindergarten education reflect the unique developmental potential of each child and, on the other, the needs of society at large.

Children who attend our kindergarten for the first time learn that, aside from their families, there are other responsible adults they can bond with. They get to know other children, gradually identify themselves with the group and establish friendships. They discover new spaces in the rooms at Little Daisies and explore a new world of experiences.

The children's positive self-awareness and gender awareness strengthen continuously as they acquire new skills and proficiencies. Learning by playing is essential in this process.

The children begin to understand what is right and wrong. Their actions become increasingly responsible and they begin to follow rules and norms. They learn social interaction skills and the rules of the classroom. They understand positive social conventions and grasp their meaning in everyday life. They learn better self-control and how to deal with situations that come up regularly. They learn that while people are equal, they are also different and to start accepting these differences. In an age-appropriate way, they learn what is important for good health.

The children's linguistic and cultural identities are supported, and they are encouraged to express their capabilities in many different ways. The children are introduced to different forms of arts and crafts, music, regional and national culture and, to the extent possible, other cultures. The children develop interests in nature. They explore their environment in different ways and are encouraged to be enthusiastic about its beauty and diversity. They learn how their actions affect the environment. The foundation of math, reading and writing is laid in the kindergarten groups. Through the immersion method, they become familiar with English and German in their everyday environment; multilingualism is seen as a valuable resource. The children in the kindergarten also learn to use a range of media.

We give children the chance to develop the following fundamental capabilities and abilities:

Social and emotional skills

- Building bonds with others, learning how groups work
- Self-awareness, self-confidence and self-control

- Personal expression of needs, feelings and thoughts
- Decision-making and accepting responsibility for decisions made
- Conflict resolution
- Empathy and solidarity with others as well as respect for differences
- Playing alone and working together in a group
- Acceptance of boundaries set by adult and other children
- Patience
- Resilience

Physical and cognitive skills

- Intellectual, artistic, musical and gross and fine motor skills
- Personal hygiene and health
- Respect for the environment, environmental education
- Media competence
- Knowledge of a second language (English/German)
- Basics mathematical principles
- The foundations of reading and writing skills
- Learning how to learn

5. How the Educational Program Is Carried Out

5.1 *Gaining New Experiences*

The teachers involve the children in the process of gaining new experiences so that they actively expand their knowledge by building on what they already know. Gaining new experiences happens by interacting with materials and existing knowledge. During free play, the children have many toys at their disposal in the kindergarten, such as bricks, cars, Legos and dolls as well as a play shop to immerse themselves in their own world. Various materials are also available in the outdoor-house of the nature group; However, the focus in this group is on discovering and using natural materials.

The educators offer children of all ages new activities daily in the subjects of music, creativity, sports, language and experiments. In these, they try to pique the children's interests in a participation-based way. In addition, the teachers encourage the children and guide them to learn more, grow, and reach new developmental milestones. A main goal is becoming independent. The children learn to close zippers and buttons, to put on their shoes and to plan and implement organizational procedures.

The strong relationship between a child and primary caregiver evolves during the kindergarten period. The educators step increasingly into the background, becoming active observers, while the child's group of peers becomes more important. Kindergarten children constantly learn from and about each other by triggering development of their thoughts, imagination and social behavior. Our kindergarten children are in a mixed-age group. The older children learn to be considerate of the younger children, while the younger ones benefit from the experience of the older ones. They learn to communicate with each other and to play together. They express their wants and share them with others. Respect for the other children in their group grows along with the acceptance of differences.

The children increasingly understand what it means to be responsible for their own behavior. They begin to foresee the consequences of their actions and change accordingly.

5.2 *Educational Environment*

The educational environment of the kindergarten is designed to correspond with the physical, psychological, social, cognitive and emotional environment in which all activities takes place.

Our well-thought-through surroundings arouse and stimulate a child's curiosity, interest, and motivation, and promote child-appropriate activity and a child's ability to become self-absorbed in an activity. Such an environment supports children in their development and learning process as well as in the assessment of their own abilities in many ways. It offers the children ample opportunity to play and do other activities as well as the option to withdraw from the group. It provides a space to and facilitates activities that promote communication and gives the children the opportunity to work on language development.

In the outdoor group, we visit places that were previously selected from an educational and safety-related point of view. These places are on the one hand in the vicinity of the daycare and range from orchards, places on the Isar or the district of Haidhausen to the Perlacher forest. The children are faced with new challenges every day on their walks; teamwork is required, curiosity and motivation aroused, planning action is made possible. The container as a retreat in the Hypopark offers the children peace and structure.

The prevailing atmosphere in the kindergarten is cheerful, open, encouraging, loving and serene. All the materials are easily within children's reach. The health and safety of the children is assured in all areas, while maintaining an aesthetic balance wherever possible.

5.3 *Educational Approach*

5.3.1 Rituals, permanent offering and open concept

At Little Daisies, each child settles into the center with a primary care giver and a big brother or big sister (Patenkind). The group gives the child a sense of security and community and offers them a point of orientation. Daily group rituals like morning circle, book circle and lunch structure the children's daily routine. Lessons such as preschool, music or a mindfulness lesson are offered for all children, sports especially for the house children. All children in a group go to the park together or on excursions. Around once a month, the house children have the opportunity to take part in the daily activities of the outdoor group.

However, for the majority of the day the children can decide for themselves what they want to play and with whom. This 'open' time gives the children a chance to pursue their individual interests. We know that self-initiated, self-regulated, and self-directed choice in their activities, social interactions, and the areas in which they play are optimal for each child's personal development in a given learning environment. When the classrooms are open, each team member of the inhouse kindergarten is responsible for a specific area. They may use this time to offer an activity for the children to participate in, or they may act as an advisor, in particular to stimulate language, and observer while children engage in free play.

5.3.2 Mixed Age Groups and Separate Age Groups

At Little Daisies Kindergarten there is one mixed-age group of children. The younger children benefit from having older children as role models. They develop independence by observing older children and are exposed to numerous developmental stimuli. It is also important for the older children to learn to be careful around the younger children. Their self-awareness is strengthened through the presence of younger children. Mixed age groups promote cooperation and lessen competition, so there are fewer conflicts.

This makes it possible to offer activities specifically created for the individual classrooms and developmentally appropriate for that age group. We take field trips with the second and third year to forest, or to the zoo. We offer music classes and gross motor activities tailored to each age group separately. We also introduce age-appropriate learning opportunities with the younger or older children, such as using scissors.

On the other hand, throughout the day we offer activities that are only for certain age group(s) to meet the developmental needs of children in age-appropriate learning. Preschool children, for example, have four hours of preschool lessons per week. The older children of the indoor kindergarten also have sport in a nearby gym and the younger children of the indoor group have their own music course.

5.3.3 Stimulus-Based and Observational Teaching Methodology

Sometimes the teachers actively participate in activities with the children. Other times they are sideline observers, watching as the children play, explore and acquire information through interactions with other children and adults.

The Finnish method is a style in which adults seek to stimulate interest in children as well as have expectations of and set requirements for them. The teachers are responsible for establishing and upholding boundaries and creating a positive atmosphere at the center. The activities offered are child appropriate and take into consideration a child's skills, abilities, feelings, and knowledge. The goal of this process is to give children the opportunity to reach their next developmental step. Activities offered to the children by a teacher are designed so that each child is neither over nor under challenged. No child is held back from achieving a developmental step or has expectations set too high for them. A child that does not want to take part in an activity is never forced to do so. The children always have the right to choose activities they want to take part in. The educational process is a co-constructive process in which both the child and the adults take part, with the child and his or her own ideas at the core. The teachers help the children to become aware of and contemplate their developmental steps and help them realize they are responsible for their own achievements. This helps their self-confidence and transmits important know-how about how they can learn.

Equally important to the stimulus style of teaching is the observational one in which a child is given time and space to be creative. During free play, the children explore their environment and have time to develop through their own experiences and imagination. The teachers prepare the rooms for this free play so the children can find materials and play areas as well as places in the nature in which they can let their creativity unfold freely. During free play, children learn how to socially interact with the other children. They make friends and feel more secure. The children also learn conflict resolution and communication, and respect for their own needs and the needs of others. During this time, the teacher takes on the role of a companion and observer of the activities.

5.3.4 Participation in the Kindergarten

For us, participation means allowing the children, based on their age and development stage, to participate, co-create and be involved in decision-making. Children at Little Daisies can decide what and who they want to play with. They can also decide if they want to have quiet time or be active. The children may choose what rooms they want to spend time in at the center as well places in the nature they would like to go to. They also decide how physically close or distant they want to be from others.

A child-teacher relationship based on trust is required for this form of participation to work. This involves loving communication, dependability, consolation, encouragement, and support.

Teachers acknowledge the needs of all children and respond to them with gentle care. Teachers also offer a secure environment in which the children can develop at their own pace. When children give off signals, the teachers try to react accordingly. Every reaction from a child (verbally or e.g. as crying, withdrawal, or hitting) is taken seriously, is accepted and interpreted by the teachers nearby. The teacher reflects and then tries to remove the cause of this behavior and checks regularly with teammates if the presumed cause for this behavior has been removed.

The educators encourage the children to give feedback to them and the children's peers. For children to build good self-esteem and self-confidence, it's important for educators to constantly encourage the children to express their wants and interests. The children can influence, for instance, which projects or activities are offered, which places they want to visit, the appearance of the classroom and which rules to set for the group.

This must occur for the children to perceive Little Daisies as a place they can call their own and at which they are taken seriously. In the daily morning circle, the children are given the opportunity to tell stories. They also have the right not to participate. The children meet regularly for a children's conference. Here, children and teachers discuss topics of interest and which activities to pursue. The forum is also a chance to establish rules together, solve problems the children face in daily life, and lay the foundation for democratic thinking. In an annual children's survey, the children are encouraged to reflect on the past year and to share what they liked and disliked.

When children experience at a young age that their opinions and wishes are taken seriously, and they feel accepted and valued, and see they can act independently, they develop a healthy sense of stability that for life.

5.4 *Daily Routine*

A well-thought-through, structured daily routine is the basis of every good education program. Of course, such a daily routine must also leave space for spontaneity and creativity, so that learning and experience processes are not interrupted.

The daily routine at Little Daises is:

- Drop off time and free play (outdoor and indoor group)
- Open breakfast (outdoor and indoor group)
- Morning circle (outdoor and indoor group)
- Welcome, project work in small groups/free play/excursion (indoor group) / Excursions in the nature or the neighborhood (outdoor group)
- Story time (indoor group)
- Lunch (outdoor and indoor group)
- Nap/quiet time (outdoor and indoor group)
- Preschool/free play (outdoor and indoor group)
- Snack (indoor group)
- Free play/special activities/courtyard or playground (indoor group)
- Late afternoon snack (indoor group)
- End of kindergarten day (indoor group)

5.5 *Observing the Children*

During the settling in period, from September through October, it is extremely important that each new child has the opportunity to feel comfortable at the center or the places we visit in the nature and with the teachers. Every developmental milestone must be handled in a time appropriate manner. In the first few months of the school year, weekly settling in schedules will be created for each individual child. This schedule is agreed on and carried out with the cooperation of the families. A successful completion of the settling in period is necessary backbone for a child's time at the kindergarten.

As soon as the group's dynamic has been established, the children feel comfortable in their surroundings and in the group, and they are ready for new things, the teachers' task is to do group projects with the children that allow them to expand the knowledge they already have about a topic. Educational plans are created on a weekly basis, but they may be adapted flexible to reflect the interests of the children.

Each child's progress is observed continually and his or her development is discussed with the team. A formal observation of each child is carried out at least twice a year. We use Kompik's developmental checklist to monitor a child's developmental progress. In a portfolio for each child, we also document, in writing and images, learning experiences, valuable stories from everyday life at the kindergarten. The children always have access to their portfolio.

5.6 *Collaboration with Parents and Guardians*

Parents and guardians are chiefly responsible for their children's education. A relationship based on mutual trust, as co-educators, between the staff and parents or guardians is important for each child's happiness, development and progress.

Twice a year we hold parent-teacher conferences to discuss the development of each child. We use Kompik's observational checklist as well as free observation the learning experiences we've documented. The first conference takes place about eight weeks into the kindergarten year. We discuss how the child is adjusting to the kindergarten, possible effects of the child's attendance on the family, and answer any other questions. The second parent-teacher conference is held in the spring. Other meetings can be scheduled upon request of parents or educators.

Should the teaching staff feel that a child has special needs, we work together with the parents to find suitable support from specialists. Our teaching staff is trained according to the German Schutzauftrag §8a SGB VIII (child endangerment laws) and takes a refresher course every two years. An emergency plan outlines the steps taken should teachers suspect child abuse and they will contact an ISEF specialist. Preventing child abuse is a topic at a parent evening every other year, to ensure parents have all the necessary information on the topic (the children themselves can also take a self-assertion course every year on this topic, which is organized by the kindergarten)

An additional parent evening covers how parents can help their child develop high self-esteem to avoid becoming a victim of abuse. The children can also attend a self-esteem course that is organized by the kindergarten.

Parent evenings take place three times a year and cover organizational topics, questions about education and the curriculum, and the plans for the months ahead. A monthly review of projects and activities is sent home once a month; each week, the families receive a weekly review of the past week, in the form of an email with a bulleted list. The whiteboard provides an overview of what happened that day.

Parents can opt to attend informational events at the kindergarten on topics like children's sexual development and first aid.

The parent board is the voice of the parents. It meets with the kindergarten's leadership team and owner every three months to discuss and solve key organizational, curriculum-related, educational and structural issues. Our annual parent survey, which asks questions about parent satisfaction and organizational aspects at the kindergarten and educational requests, is reviewed with the parent board.

6. Goals and Content of the Kindergarten Educational Program

In this chapter, we first look at the adjustment period for children new to Little Daisies Kindergarten. After that, we will focus on our seven main developmental areas, the areas that will be concentrated on after the adjustment period. These are as follows: language; math; arts & crafts, music and culture; nature and experiments, physical development, ethics and health. Finally, we cover preschool, which prepares children during their last year of kindergarten for the transition to first grade.

6.1 *Settling In*

The settling in process is a delicate time not only in the emotional life of a child, but also in his or her experience of bonding and trusting his or her parents. This is especially the case when a child is attending a center for the first time (never attended a crèche or other kindergarten). Parents and children need time to work through the mutual separation.

The settling in process is finished when the child accepts the teachers as trusted caregivers and the child can remain at the center from the time he or she is dropped off to pick up time, without undue stress. This process typically lasts one to three weeks. Every settling in period is different and based upon the needs of the child. Children who previously attended another childcare center usually have an easier time with the adjustment period.

Children that attended Little Daisies crèche are prepared during their time at the crèche for the transition to the kindergarten. On field trips, the teachers often pass by the kindergarten and explain the differences between the kindergarten and crèche. In spring and summer, the crèche children visit the kindergarten children and vice versa.

Parents can also learn a lot about the transition. On an information evening and at a get-to-know day, new parents and their future kindergartener get a taste of the center. A special parent evening about the settling in phase helps parents prepare for the switch.

Here is an overview of the settling in schedule in September:

Day 1, 9:30-11:30: The children eat breakfast at home, and eat lunch and nap at home.

Day 2, 9:30-12:30: The children eat breakfast at home, but eat lunch at the kindergarten.

Day 3, 9:00-12:30: The children may eat breakfast at the kindergarten and stay until after lunch.

Day 4, 9-12:30/14:30: Half the group (group 1) naps for the first time and stays until 14:30. Children in this group who don't take a nap may also stay until 14:30. The other group (group 2) stays until after lunch and goes home at 12:30.

Day 5, 9-14:30/15:30: Group 1 children stay until 15:30. Group 2 children nap for the first time and are picked up at 14:30.

Day 6: Same as day 5

Day 7, 9-15:30/until pick up: Group 1 may stay until pick up, group 2 until 15:30.

Day 8, until pick up: All children may stay until pick up time.

As mentioned above, settling in is different for every child and may take more or less time. To give the child time to adjust to the daily routine, parents should keep their work schedules flexible for three weeks.

6.2 Core Subject Areas

After a new child has successfully settled in and the first two phases have passed, we turn our attention to the five core subject areas. Each week, we offer various activities and projects that cover the five core subject areas.

These are:

- Language and interaction
- Mathematics
- Nature and experiments
- Physical development and motor skills
- Arts and crafts, culture and music

Additional subjects we cover each day include:

- Ethics
- Health

6.2.1 Language and Interaction

Language is a means of thinking and expressing, and lays the foundation for communication. Children analyze their surroundings by using the words they have learned and thus form their own understanding of the world. Education in a kindergarten strongly supports using language to aid the development of a young child's thought and learning processes, social interactions, and emotions. Along with their families, we help children acquire language as a tool with which they can shape their image of the world.

Showing language skills by example, the teachers explain all actions to the children, talk to them about their emotions, and the reasons for their feelings and actions. In addition, teachers pay attention to the feelings, sounds, facial expressions and gestures of the children and, for children who cannot, help them put this into words. This helps increase the children's vocabulary while also encouraging them to speak about their feelings and thoughts, and to express their observations verbally. It is important to give the children the time they need to express themselves. The children are encouraged to become good listeners and storytellers. As

part of a group, they get used to listening to other children and adults, taking part in conversations and, when necessary, waiting until it is their turn to talk.

In order to support language development, the group uses finger plays, rhymes, books and songs. Language and memory games in addition to books and songs also come into play. The language used to conduct morning circle alternates between English and German. Altogether, this ensures that language acquisition accompanies children throughout each day, at all times. We focus on children's interests, which teachers pick up on and follow empathetically. Learning language is integrated into daily life in an appreciated and enjoyable way.

The teachers see constantly reflecting on and improving how they educate the children as a necessity.

Our educational program lays the foundation for learning reading and writing skills. Reading aloud and looking at books are not the only things that support this; the way we have labeled chairs, drawers and coat hooks with words and pictures also supports the process. By connecting images, objects, and the written words, the cornerstones are laid for learning reading and writing later on. A further basis for the beginning of literacy is that children hear and listen, know that they are listened to, are allowed to talk and be talked to, be part of conversations, ask questions, and get answers. Having experienced an environment that provides this basis, the children have developed their communication skills and can easily acquire their reading and writing skills. All creative activities we offer (finger painting, coloring, cutting with scissors, etc.) teach the eye-hand coordination also necessary for writing. Creative activities using pens and paper, paint and clay help the children develop fine motor skills. This lays the foundation for learning to write later on. The older children in the kindergarten start matching sounds with letters, if they show interest, learn to write the alphabet. Some start reading their first words. We read aloud books on subjects that are of interest to the children. All this piques children's interest in reading and writing.

We are a bilingual (German-English) kindergarten and the children are exposed to both languages all day long. To us, multilingualism is a valuable resource for the children's personal and social development. Our teaching staff is made up of fluent English speakers as well as fluent German speakers. The fluent English speakers are able to speak and understand German and vice versa, which means the children can always make themselves understood, and also enables all teachers to communicate in one of the two languages with the parents.

The children are exposed to the new language through the immersion method. Immersion is the most successful method of language learning.

The immersion concept works as follows:

- Each teacher speaks exclusively one language with the children (one person, one language).
- The children learn the second language the way they learn their first language. We don't teach it through vocabulary lessons, but rather they learn it through osmosis as we play and interact with them in it. The teachers speak about what they are doing and what things are called ("I'm picking up the ball") and over time and through repetition, the children understand and can use the second language.
- The children are allowed to speak and answer in the language of their choice. They are not forced to use the second language.

At the end of the second to last year of kindergarten the children's level of German is tested using Seldak and Sismik assessments. The Seldak assessment is specially designed for children of non-German parents. Children who lack certain German know-how are enrolled in a special language course called Vorkurs Deutsch. The lessons are equally shared between a nearby grade school and Little Daisies. The course focuses on improving a child's awareness of sounds. It helps them identify formal characteristics of spoken German. Methods used include identifying words that rhyme (house-mouse, Haus-Maus), words in a sentence (stories are read aloud and the children make a certain noise when they hear a certain sound), syllables as part of words (clapping), and individual sounds in the words that make up a sentence. During free storytelling time the children improve their speaking skills and lessen their inhibitions.

6.2.2 Mathematics

Our education program strives to lay the foundation for the future understanding of mathematics. The children are taught to see mathematical phenomena that turn up in everyday situations. Children's understanding of math can be enhanced in a natural way through role playing, stories, songs, sports, by imitating (counting plates aloud, for example) and providing lots of visual examples.

Small mathematical activities and exercises involving the children are done every day. This can be in the process of doing another activity like "How many pine cones did you collect? Let's count" or through specific math activities. We regularly use the play-based program

Numberland (German: Zahlenland) to introduce the children to the concept of numbers and quantities.

Moreover, by classifying, comparing, and sorting, children start exploring objects, creatures, bodies, figures, materials and phenomena in terms of form, quantity, color and other characteristics. The children learn basic addition and make their own number rods. They learn about time, weighing, and comparing and measuring quantities. This may involve measuring the classroom or our feet. We want children to learn early on how exciting math is and how much fun it can be.

6.2.3 Nature and Experiments

We aim to help the children understand their surroundings and strengthen their relationship to nature and the environment through experiences and emotional connections. In the kindergarten, the children learn about the difference between the natural world and the world created by humans, and the differences between peoples and cultures. They also learn to recognize the effects their own actions have on their immediate surroundings. Nature's biological diversity, beauty and pleasantness are pointed out to the children, as well as the need to take these into consideration when doing things and to be environmentally conscious. They learn about recycling and how valuable our natural resources are.

To give the children the chance to experience nature, we go outside with all of the children on a daily basis, either in our garden, to a nearby playground, to the Isar, to an excursion or on a walk through Haidhausen. The children go on an outing to the forest every other week (Perlacher Forst). The outdoor group is in the nature, the forest, on playgrounds, in the district or in the park at the Isar each day from 9:30am. This group is able to get to know the direct experience with the elements and the connection between man and nature in a special way.

In the garden, the kindergarten has exclusive use of a sand box with a slide (approx. 40 m²) and shared use of an additional fenced-in area of the courtyard (approx. 70 m²). Here the children are constantly supervised by at least one teacher who ensures before and during outdoor play that the garden doors/house entrances are closed and that the outdoor area can be used safely by the children. Due to its size, the courtyard cannot be used by the whole group at once. That's why we take the entire group to the nearby fenced-in Hypo playground, just a five-minute walk from the center. In addition to slides, sandboxes, climbing toys and

swings, there is also a water area, football and basketball courts and grassy areas. The outdoor group has its own fenced-in area of approx. 140 m² in the Hypopark

The kindergarten children take field trips related to projects in order to connect what they have learned in the kindergarten with the world they live in. They go to the zoo, museums or the lake, depending on the topic they are covering. For some excursions, we divide the group to respond better to certain ages. For instance, we take the preschool children on special outings.

We do various experiments with the children that reflect the children's interests and our subjects. In the spring, we plant seeds in our flowerbed and wait for them to grow into flowers. In the summer, we find out which objects float and which ones sink in water. The children observe how leaves fall from the trees in the fall. We make popsicles in the winter and dig in the ground to see what lives there. The children do experiments with colors, magnets, electricity and volcanoes they made themselves. We try to show the children how exciting the world is so they are enticed to think up their own experiments.

The experiments teach the children to identify connections and draw their own conclusions. After an experiment, we discuss the results and what we have learned. These experiments are usually conducted during small group time or in the nature.

6.2.4 Physical Development and Motor Skills

In children, daily physical activity is essential for balanced growth, development and health. On our excursions in the nature as well as through play and physical activity, children improve their physical and motor aptitudes and learn to control their movements and fundamental motor skills. Gross and fine motor skills as well as manual skills and hand-eye co-ordination are acquired in everyday activities. In addition to the activities offered by the teachers, the children are given time to choose physical activities and games themselves. Children are encouraged to learn to act in a self-sufficient, active, co-operative and courageous way. Physical exercise is important for the health and well-being of children, and we want them to learn to place a high value on it.

The children of the outdoor group have the opportunity to practice their gross motor skills on their forays into nature - they balance over tree trunks, climb trees, cross rough terrain. The

educators may take materials such as balls or ropes with them to encourage the children to do more gross motor exercises.

Each day, the inhouse children can romp around in our playroom and use the climbing platform and our sporting equipment (ladders, trampoline, balls). The children also have a supervised sports lesson every week to promote their physical development and motor skills. The three-year-olds playfully improve their gross motor skills in our playroom. The four- and five-year-olds take part in the sports program of the Kindersportschule München (KISS). Here they improve their fitness and coordination, learn the basics of different sports and practice playing fairly. Regular sport helps the children develop good self-esteem and is good for the relationship between the children and their teachers.

6.2.5 Arts & Crafts, Music, Media and Culture

Music and other arts forms play an essential part in our educational program for the development of emotional, practical, and cognitive skills. Creativity, imagination, and self-expression in children are encouraged by painting, music, arts and crafts, theatre, dance and exercise. Through play and active experimenting with artistic activities, the children gather and process information about themselves and the things going on around them. They are encouraged to continue working on artistic projects over multiple days and to be proud of their work, as well as to show respect for the work of others. This supports their ability to empathize and perceive, and the sense of spatial orientation. Learning processes are thereby enhanced, and the children acquire competencies essential for everyday life as well as for mental processes and problem solving.

The children are shown how to explore the world of sounds and learn about the communicative effects of music. They are encouraged to express their thoughts and feelings verbally and using body language, such as verbal emphasis, tone of voice, facial expressions, gestures and movement. The children are encouraged in our regular song circle to invent their own songs and to play with sounds and language. Learning English and German is also much easier through songs and music: language is learned through constant repetition and rhythm.

Once a week, a music teacher comes to teach all of the children early music education, rhythm and instruments. They also learn a lot of new songs.

In connection with our subjects, we encourage the children to create and express themselves in a wide range of ways, such as with colored pencils, crayons, and paints. The children can access the materials independently to experiment with, as they want. In addition, an art teacher visits us once a month, who runs creative offers with all children.

The children also craft different objects for each topic and learn to use tools. They make things out of wood, nails and glue, under close supervision. It's a chance for the children to learn to work creatively with the most random things, often things they find, and to implement their own ideas.

Media competence is important for kindergarten children. The children learn how to deal with different media (CDs, cassettes, books, magazines, DVDs, computers) and to use them correctly, independently and responsibly. They understand how to learn through media, how the different media work and how to express themselves through it (photos, videos, email).

As a bilingual institution, our children come from different cultures and backgrounds. Strengthening a child's cultural identity and their understanding of their own cultural heritage is very important to us. In a range of projects, the children have the opportunity to introduce the cultures they know from home and make them familiar to the group. In the past, we've travelled throughout the Earth's continents and asked the parents to visit the kindergarten to tell the whole group about their homeland. At our parties, the parents bring along traditional food and we also celebrate festivals from other cultures, such as Halloween. The materials we have on hand help the children get to know different cultures and ethnicities (for example, dolls of different skin tones, books on different cultures, etc.). Our center is home to different languages and cultures, and our children respect and appreciate each other for their differences.

6.2.6 Media Education

The use of digital media is a useful addition to the bilingual language acquisition and the acquisition of many other skills, such as the promotion of concentration, fine motor skills, creativity, as well as process-based thinking.

In addition to analogue materials, new media can be used in a more targeted and varied manner and adapted to the respective needs and the individual level of development of the child. This applies to both German and English language acquisition and to all other forms of cognitive learning and creativity in connection with media. The audiovisual and interactive

elements emerging with the use of a tablet are a useful support during this learning process and serve to make the approach more holistic.

Opportunities that we see in the use of digital media in our childcare center for ourselves and the children:

- The children learn the sensible use of digital media and the age-appropriate use of them as well as the risks associated with digital media.
- According to the level of development of the individual child, digital media can contribute to equal opportunities for children when using high-quality and educationally valuable apps.
- Children with little or no age-appropriate media experience can benefit from this especially through joint and creative efforts.
- Also in the educational partnership with the parents, the digital media can support us in advising the parents on the media education of their children and in deepening and supplementing the already existing knowledge and skills on this topic both with the children and the parents.
- The use of media in the day-care center also includes the promotion of creativity, language training and promotion and the enrichment of pre-school education (Schlaumäuse, project work).

When using the digital media, the children are always accompanied by a staff member.

We ensure that every child does not spend more than a maximum of 20 minutes per week on the tablet or other digital medium. The tablets are used both in everyday life and in specifically offered projects. These are open, alternating offers, adapted to the interests and level of development or the need for support of the respective child or group. We also ensure that the participating children rotate.

Through the guidance and support of the educational staff, the children are carefully introduced to the topic, the children's world is included, and their ideas and suggestions are taken up. This means that the media activities are designed so that they are relevant to the children's needs.

6.2.7 Ethics, Gender & Inclusion

6.2.7.1 Ethics

It is important for us to convey general societal values to the children. We begin by helping the children develop self-respect. We build upon that and teach them to respect others, to respect society, and to respect the natural environment. Teaching values is integrated into every situation that comes up in the kindergarten. It is dealt with through discussions or in role-play, which helps promote ethical thinking in the children.

These values we aim to convey include: tolerance and mitigation, equality and fairness, politeness and courage, and the ability to maintain one's own identity while expressing kindness and care for others.

6.2.7.2 Gender

Ethics in education also means that children of different genders recognize each other as equal and value each other's differences. Each child is unique, and we show our respect to them regardless of gender, sexual orientation, race, religion, cultural background, abilities or other individual characteristics.

We help the children develop their own identity, interests and self-awareness. To this end, we question traditional gender norms and traditions, get to know our own ideas and identity, learn to reflect on them and respect others. Diversity is the norm at Little Daisies.

Every day we give all children equal opportunities, resources, and space to express themselves. We encourage all children to be unbiased and open-minded, to reflect on prejudices and to respect themselves as well as others.

As educators, we make an effort to be aware of our own beliefs and behavior. We reflect on them as a team and question stereotypes, we encounter, including those related to gender.

6.2.7.3 Inclusiveness

We acknowledge and respect the personality and individual abilities of each child, parent and team member. Everyone has the right to be accepted for who they are.

The similarities and, more importantly, differences between the children encourage them to learn from each other and are viewed as enriching.

All children have the same opportunities to participate in everyday life at the center, such as children's conferences, projects and activities. This helps us ensure equal educational opportunities long term.

Our team treats the children and families in an open, appreciative way.

6.2.8 Health

Our educational program is meant to enhance the children's physical, mental and social well-being, as well as their growth and development. Positive experiences and a variety of occasions for interaction are designed to help the children become aware of their relationship with others and the environment. The ability of the children to take responsibility for their health and well-being and to act accordingly is taught in normal everyday situations. They also learn the basics involved in their daily hygiene and health. The children learn to wash their hands before meals, and to brush their teeth after. They learn about good table manners and healthy eating. The children help prepare breakfast and snacks and set the table or cleaning up after meals. They become responsible and take over chores, a key step in becoming independent.

Learning about health includes the importance of healthy eating. The majority of our breakfast comes from the Ökokiste, an organic food service, and is prepared by the staff. We have different healthy products for breakfast every day. On Mondays we have yogurt and muesli; on Tuesdays bread with cream cheese and raw vegetables; on Wednesdays, bread with fruit and milk; on Thursdays, pretzels with cold cuts and fruit; and on Fridays, hard cooked eggs and fruit. Our lunch is delivered by the Kinderküche whose owner, nutritionist Susanne Klug, places emphasis on balanced nutrition and uses organic or high quality regional food in her cooking. In the afternoon two nutritious snack – fruit and bread or a rice waffle– come from the Ökokiste.

At Little Daisies, children learn to serve themselves the amount of food they can eat. They are encouraged to try all foods, but are not forced to eat something if they do not like it. At mealtimes, children sit together in small groups to create a family-like atmosphere at the table. They understand that mealtimes are a time to relax and socialize with others.

In addition, the children learn about manners social graces and are give the chance to practice them. This encourages the children to interact in a non-aggressive way and to develop positive emotional relationships with others.

6.3 *Small Group und Project Groups*

Throughout the week the teachers of the indoor kindergarten offer different activities during small group time that focus on the five core subject areas. Ethics and health are part of the daily routine. During small group time in the morning and afternoon, the teachers set up different areas of the kindergarten so that the children can take part either in teacher-led activities or self-led ones.

In addition to the free play areas, the garden, the play area and an experiment table also available, to name a few examples.

On their excursions into nature, the team of educators in the outdoor group ensures that all five major areas of knowledge are also covered here, either through offers that the educators prepare for and with the children or, depending on the situation, through children's experiences and discoveries in nature and specific inquiries and listening.

In addition to small group time, there are projects the children can participate in. The projects are designed to suit the children's scope of experiences and to build on topics that help the children to develop, and to analyze the world. During small group time and free play, topics often arise that the children are particularly moved by and want to know more about. They have the chance to do so in project groups.

This process requires that the teachers carefully observe the children. At the children's conference, potential topics for projects are brought up and a decision with the children happens about implementing it. In project groups, it's important that the children run the project and develop hypotheses. The teacher involved accompanies and observes them, possibly sparking new ideas if the children are stuck. Depending on the children's level of interest, the project lasts for a few weeks or several months. Ultimately the children determine the direction it takes as well as the intensity and duration. This means the curriculum varies from year to year in the kindergarten. Here is an example of how two project groups in parallel could run over the course of a kindergarten year:

September

- Get to know each other (introduce songs for morning circle, group name, family trees)

October

- Halloween
- Start children's conference, elect children's representatives
- Work together to define/introduce center rules
- Visit Maximilianeum

November

- St. Martin
- Project group: Fire / light and dark / visit fire department

December

- St. Nikolaus Day, advent, Christmas
- Project group: hot and cold / how do we use fire?

January

- Project group: water, ice, snow / where does weather come from?
- Go sledding / ice skating

February

- Carnival
- Project group: Why do we and nature need water? / Water cycle

March

- Project group: Which plants are starting to bloom?
- Start planting project

April

- Easter and Easter egg hunt
- Easter breakfast with parents, include traditions from other countries
- Project group: Offer home-grown herbs / cress for breakfast

May

- Project group: What plants do we find in the meadow and what are they good for?
- Press plants and create plant book
- What means of transport do we use to get around? / Traffic education

June

- Project group: Inner-city traffic
- Visit to the museum of transportation/traffic

July/August

- Project group: boats
- Visit to the lake
- Summer party with the parents

In small group work the children are exposed to a wide variety of experiences during the week, many of them new, and stimulated in all areas. Each child finds something they are interested in. The project groups give the children a chance to learn about a topic in greater detail and to look at it from various perspectives. There is no limit to the children's creativity and it is amazing to see what results.

6.4 *Preschool Curriculum*

6.4.1 Transition From Kindergarten to First Grade

The kindergarten's role is to adequately prepare the children during their time at Little Daisies for first grade. We begin doing so on their first day here. Successfully preparing them for and seamlessly transitioning them to school requires close collaboration between parents, the center and the elementary school. In particular, Little Daisies works with the elementary schools in the Kirchenstraße and Flurstraße.

All Little Daisies preschool children visit one of the primary schools in the spring accompanied by their pre-school teacher. For children enrolled in school, school visits are important to get to know the new life of the school and possibly even their new caregivers at an early age.

Some children may need more intensive preparation before starting first grade. In this case, the kindergarten and grade school may have close contact during the last year of kindergarten. Parents of these children are asked in one-on-one talks for permission to allow these exchanges to take place as needed and after speaking to the parents.

6.4.1 Preparatory German Course: Vorkurs Deutsch

For children who are to participate in the preparatory German course Vorkurs Deutsch, with their parents' consent, permission for the center to discuss the course with the school is requested at the end of the second to last kindergarten year. Children who speak German as a first or second language participate in Vorkurs Deutsch 240 to improve and foster their language know-how and development. Participating helps these children become more successful when they start school. The children's language skills are tested in the first half of the second to last kindergarten year. The preparatory lessons are split between the kindergarten and a local grade school.

6.4.2 Objectives of Preschool

Our kindergarten curriculum aims to ensure that children leave here with all the skills, social and cognitive, they need to successfully start school. Our curriculum is designed to lay the foundation in kindergarten for a successful school career.

During their time at Little Daisies, children learn to deal with conflict properly, enjoy their success and work through failure. When necessary, they learn to ask for help, assume responsibility and become independent all while developing verbal and mental competencies.

The aim of preschool lessons is for the children to build on the competencies that are required to start first grade. We approach each child individually and at their level of development and encourage them to set their own goals and reach them. The children are encouraged to contribute their own preschool topics.

6.4.3 How Preschool Learning Is Carried Out

Preschool lessons take place four times a week, twice in German, twice in English, by the respective teachers. The children of the outdoor group take part in the preschool lesson in the inhouse kindergarten three times a week.

6.4.4 Preschool Education Curriculum

The preschool education program is designed in close collaboration with the local grade schools. Topics it covers include:

- Language and fine motor skills
- Number comprehension
- Recognition of shapes and patterns and following processes
- Media competence

1) Language and fine motor skills:

The children should gain a feel for sounds. In different exercises for various sounds, they start to understand language. This is a prerequisite for learning to read and write at school later on. Often, the children can already write their first name. Still, we emphasize how to correctly pencil grip and good hand-eye coordination (making loops, thematic-based painting).

All children can enhance their language skills in language games, rhymes, jokes, poems and free storytelling.

In German preschool lessons, children with special needs in German receive intensive lessons from a native German speaker. To further encourage multilingual/German-speaking children's German skills, there is the possibility to register children for the Vorkurs Deutsch at the local grade school.

- 2) Number comprehension: By practicing numbers, the children learn to count and, if they want, to do simple arithmetic. They can also learn to recognize and write numbers.
- 3) Pattern recognition: In preschool lessons children also learn to put colors and shapes in a certain order and to recognize patterns. We also practice following instructions and organizational tasks, such as packing their backpacks for a field trip.
- 4) Media competence: In media education lessons, the children learn about computers and complete a computer permit. After obtaining this, they are allowed to try out basic educational programs on the computer.
- 5) The preschool children go on field trips related to each topic. This includes eating at a restaurant and the children order their own food, pay attention to their manners and pay for themselves. We go to the theater or a concert. At the end of the school year, we visit a local school to ensure the children feel comfortable about making the transition.

At the end of the school year, the preschool children have a sleepover at the kindergarten, and we celebrate the end of kindergarten with a big end-of-year party.

7. Quality Management

In order to constantly maintain and improve the quality of our work, we as an organization, as a team and as individuals never stop reflecting on our work or educating ourselves.

7.1 Staff Planning and Curriculum Days/ Development

At least three times a year we have staff planning days. These are occasions for us to work on evolving our educational work and our curriculum. We introduce new pedagogical ideas, invite external trainers to join us or discuss organizational changes. The outdoor group team takes part in the inhouse team meeting so that a mutual exchange is possible.

7.2 Reflection Rounds

In a weekly meeting, the head of the center meets and discusses with the head of the group. Once a year, the heads of the groups/the center conducts annual reviews with the staff. Every four months, the owner or a representative meets with the teachers to reflect and mutually give constructive feedback. Leadership of the center meets with the owner or management rep on a weekly basis.

7.3 Supervision

Four times a year a supervisor pays us a visit. The supervisor is briefed on all topics that have come up within the team and discusses the children's development, when necessary, or offers support during challenging parent-teacher conferences.

7.4 Participation in Continuing Education Programs

The team participates in a range of internal continuing education programs, for instance we recently completed a program about preventing addiction. Additionally, each team member can use up to three continuing education days to pursue topics in line with their own interests.

8. Outdoor Educational Concept

8.1 Preliminary considerations and objectives

Our goal is to make nature and the environment more tangible and understandable for children. Direct contact with nature is very important for little ones. Many who grow up in cities today are largely cut off from natural environments, such as streams, ponds, meadows and forests. Their world is dominated above all by buildings, streets and cars as well as a multitude of audiovisual media. Opportunities to experience nature more intensively in gardens, parks and green spaces are often not used. As early childhood educators with ample experience with children, we are increasingly aware of our desire to compensate for their sometimes very unfavorable environmental surroundings and living conditions.

Our classroom is not limited to the premises of the daycare center, but also includes the surrounding area. Children as well as the adults get to know our neighborhood better and have the opportunity to discover and explore a wide range of outdoor areas. In addition, regular half-day or day-long field trips, for instance to Perlach Forest that's easily reached directly by tram, take us to somewhat further out.

We prepare for all field trips by first exploring the area ourselves, looking for suitable paths and rest areas, and planning enough time for targeted and spontaneous activities for the children. Which paths to take or places to visit depends largely on the daily schedule and the weather. In addition, it must also ensure we keep a manageable daily schedule because a reliable kindergarten setup and familiar distances are very important for the children.

The children's safety is guaranteed on our excursions. We make sure our teachers search the area we are spending time in for broken glass, cigarettes and other items that could be dangerous for children, and dispose of them if necessary.

8.2 Type and scope of the project

8.2.1 The group

Our outdoor group includes 14 children aged 3 to 6 years and 3 caregivers (1 primary teacher, 1 assistant teacher and 1 intern). This group either goes on field trips every day from around 9:30 a.m. to 3:15 p.m. or stays at our outdoor center in the Hypopark. Our outdoor preschool children have a slightly different schedule. After spending the morning in nature, they return to the indoor kindergarten for lunch three days a week for the preschool curriculum. During these lessons, some indoor children join the outdoor group to spend lunch and quiet time

there and to freeplay. This way all children in the kindergarten have chance to spend time in the outdoor group.

If a child from the outdoor group arrives late, for example due to a doctor's visit/preparatory course in German or similar, it's possible the child will spend the day with the indoor group. If no indoor child wants to join the outdoor group, the staff would look after 26 indoor children on that day.

8.2.2 Organizational matters and other educational offers

Children in the outdoor group are brought to the daycare center in the morning by their parents or grandparents, just like our indoor children, where they can have breakfast. At this time, a maximum of 39 children are at the indoor center. Then a snack and tea are prepared and packed up. Before leaving, the children use the toilet, and depending on the weather, the group sets out at 9:30/10 a.m. to explore the neighborhood for around three hours, or takes a trip to the outskirts of the city.

Between approx. 12:00 and 12:30 p.m., children and caregivers typically return from their trip. The children eat lunch and rest in the outdoor center in the Hypopark. We find this relaxation phase necessary for children and adults in order to process the impressions of the morning and to relax. The house is equipped with tables and chairs, a toilet and a heater to warm up in it in bad weather. After lunch, the children can rest, look at books, paint, do handicrafts or play freely. Around 3:00 p.m. they return to the facility or meet up with the indoor children and teachers at a nearby playground. During pick-up time, a maximum of 39 children are at the facility; by 4:00 p.m. at the latest, there are a maximum of 25 children.

One or two times a week, longer trips are planned, for instance to the Perlach Forest. Weather permitting, we spend our lunch break in the Perlach Forest on these days and also have lunch there. We return to the indoor center by 15:15.

Three days per week, the outdoor children have lessons in the house facility. Once a week, during the hour before pick-up, a mindfulness lesson takes place in the indoor center and once a week the group has music with our music teacher before setting out on a field trip. One morning a month, our art teacher visits the outdoor group to draw with the children and experiment with colors. Our outdoor children also have a chance to do arts and crafts in our outdoor center, which is equipped with various crafting material, paints and brushes.

8.2.3 Educational space

For such an outdoor group to work, familiar places, long-distance field trips, a manageable daily routine and an overall stable group of children and reliable caregivers are necessary.

For morning drop-off and in the afternoon before pick-up, the outdoor group uses the rooms in the indoor center (Kirchenstrasse 38). The outdoor building in the Hypopark is used for lunchtime and to provide shelter. Various materials and aids can also be stored in the outdoor center.

Depending on the season and educational needs, different locations in the immediate vicinity of our facility are visited on half-day and day trips. Staff visits the routes traveled and places to explore in advance to ensure they are suitable.

8.3 *Care*

8.3.1 Eating and drinking

After breakfast, the children can take a drink to-go; a morning snack is also provided as is warm tea when the weather is cold.

A larger meal usually takes place at noon in the Hypopark in the outdoor center.

8.3.2 Toileting and medical care

Before leaving in the morning, the children can use the washroom and toilets at our indoor center. They may wear diapers if necessary. The group's portable equipment includes drinking water and clean towels as well as a first aid kit.

The teachers have a mobile phone to ensure rapid help in the event of an emergency.

8.3.3 Clothing

The choice of clothing for children and teachers must be adapted to the weather conditions. It should be wind- and waterproof as possible while also being breathable, warm or temperature regulating and offer sun protection. The clothing should also be comfortable and easy to change.

Research suggests that regular, continuous stay outdoors helps to strengthen and stabilize the immune system: The body (re-)learns how to adjust to different and changing temperatures.

8.3.4 Rest periods

Tired or exhausted children can relax at the outdoor center in the Hypopark. Depending on the weather, the children can also rest outside. In summer, blankets and insulating mats are taken along, so longer trips are possible.

8.3.5 Technical equipment

It goes without saying that a group of (small) children that more or less on the go for a few hours every day needs certain equipment and materials. However, due to the educational concept of the outdoor group, it's not just about toys, but rather everyday materials for the basic care of children and for protection against certain events.

The group's equipment includes:

- Beverage bottles and food storage containers
- Diapering material, if necessary
- Some toys and activities such as (picture) books for reading aloud, etc.
- Sunscreen
- First aid kit
- Mobile phone
- Blankets and insulating mats in spring and summer

8.4 *Paths and places*

The following locations have been explored together with an expert during a curriculum day and the options and risks were discussed. On another day, we visited Perlach Forest.

8.4.1 Johannisplatz, Wiener Platz and neighborhood streets

- Location: in the immediate vicinity of the daycare center
- Accessibility: depending on the exact destination, up to a maximum of 15 minutes on foot with the children
- Type of site: predominantly densely-built, inner-city settlement with partially low-traffic streets, historically significant architecture
- Additional requirements: none

8.4.2 Hypo playground, Johannisplatz, green area Haidenaupark (playground with tunnel slide) and pirate playground

- Location: in the immediate vicinity of the daycare center
- Accessibility (Johannisplatz): about 10 minutes on foot with the children
- Type of site: small park with a designated children's playground, historically significant architecture, social meeting point for different population groups
- Additional requirements: none

8.4.3 Green areas along the Isar

- Location: between the block perimeter development on the Inner Wienerstrasse and the Auer Mühlbach as well as in the vicinity of the Maximilianeum
- Accessibility: depending on the individual destination, up to a maximum of 25 minutes on foot with the children
- Type of site: landscaped gardens; various types of lawn and meadow as well as ruderal vegetation; partly on a slope

8.4.4 Perlacher Forest

- Location: forest on the southern edge of Harlaching
- Accessibility: approx. 20 minutes by tram No. 15 and 25 from Johannisplatz (to Harlacher Krankenhaus station, Menterschwaige or Großhesseloher Brücke); depending on the exact destination, up to 30 minutes by foot with the children
- Type of terrain: extensive forest with different tree/plants, meadows and smaller clearings
- Additional requirements: somewhat higher expenditure on meals; due to the distance from the daycare center, this is especially nice for stays of several hours; food delivery box at Großhesseloher Brücke lets our caterer deliver a hot lunch here

8.5 *Educational offers*

There are countless possibilities for organizing a day with children outdoors. The following are just a few examples to show how children can experience nature. In any case, many ideas spontaneously through the observations and actions of children and caregivers, shaping children's education.

8.5.1 Your body

- Perceiving your own aptitudes and skills

- Challenging security of movement and sense of balance, especially on rough, unknown terrain and new/changing floors
- Experiencing how your body adapts to the season (temperature, light conditions...)

Examples activities for a day:

Motion games; tactile and gripping exercises; using wood to build things; various games and experiments with light and shadow, heat and cold, proximity and distance.

8.5.2 Mental processes

- Dealing with changing and surprising situations
- Experiencing behavior and reactions of others (including the teachers)
- Promoting a strong group feeling, in particular through the feeling of having achieved/experienced something together
- Experiencing and learning solidarity and helpfulness

Examples activities for a day:

Observing (social) life in the neighborhood, finding, reading and designing traces and symbols; search and orientation games; observation of (small) animals.

8.5.3 Dealing with things

- Finding and getting to know things and structures that also develop a life of their own and arouse the children's curiosity and desire to try something out
- Discover properties and peculiarities of different (natural) materials, fine motoric and other challenges

Examples activities for a day:

Building and designing together using objects they find; handling garbage; getting to know wild plants (poisonous plants/useful plants); nature experience games such as nature memory or olfactory and tactile games.

8.5.4 Spatial and temporal perceptions

- Promoting spatial and distance perception
- Being conscious about and experiencing different weather conditions
- Experiencing temporal dimensions of tension/effort versus relaxation
- Setting goals and trying to achieve them

Examples activities of the day:

Working on long-term projects such as building a tippy out of logs; tracking and monitoring seasonal changes at certain selected points/locations; exploring of new paths and rediscovering previous locations.

8.6 *Colaborating with parents*

The parents of the children we care for are, of course, included in the considerations, plans and activities listed above. Their tips and suggestions enrich our educational concept and support its evolution. Regular exchange is very important to us.

In addition to regular one-on-one interviews and parents' afternoons, parents also have the chance to participate in different group's activities. This, however, must be discussed in advance with the teachers. Like the parents, we are convinced of the value of the outdoor group and believe gives our children important and meaningful opportunities to develop and experience life.
